

EXPERIENCE

Principal Product Designer / Capital One (Enterprise Finance) Nov 2024 – Present

- Led redesign of an internal finance platform serving 300+ analysts, rethinking the end-to-end experience and underlying information architecture to better match how analysts manage data transformation and reporting. The redesign nearly tripled NPS and increased OSAT by close to 2x over one year.
- Served as design strategy partner for the company's first data product CoE — a pilot focused on the full lifecycle of data product consumption — helping define the services roadmap and prioritize scenarios that secured organizational funding.
- Designed branding and engagement materials for the CoE, establishing program identity and driving internal adoption across partner teams.
- Advocated for and embedded user research and usability testing into team workflows, educating cross-functional partners and shifting the team toward more evidence-based design decisions.
- Coached 3 designers over 1.5 years — providing design critique, hard skills development, and career feedback to 2 junior designers on shared projects and 1 designer from a separate team.

Senior Product Designer / Farmers Business Network (Finance & Lending) Oct 2021 – Sep 2024

- Led end-to-end design of the core loan application framework supporting multiple loan types and lending partners, improving self-service and reducing application drop-offs across the farmer user base.
- Designed digital payment flows for loan products, replacing a mail-based system and reducing payment processing time from 10 days to 3–4 days while improving transaction visibility for farmers.
- Designed an internal digital finance admin system to streamline the management of loan applications and services, significantly improving team efficiency.
- Co-led definition of FBN's first finance customer archetypes with the research team, informing product strategy and design decisions across the finance product line.
- Built finance-specific components for the global design library, improving cross-team consistency and reducing design-to-engineering handoff friction.
- Facilitated design thinking workshops with cross-functional stakeholders to align on roadmap priorities and generate new product ideas.

Product Designer / MegiChina (B2B SaaS — Accounting) May 2015 – Dec 2019

- Designed and shipped customer onboarding, bank reconciliation, and invoice/billing management — simplifying complex accounting workflows for business users across English and Chinese markets.
- Established the company's first design methodology and documentation standards, which later evolved into its formal design system.
- Produced booth and sales materials for 20+ trade shows, expanding brand presence across key markets.

UI Designer (Contract) / RD3, Cinafidès & Taxably 2013 – 2017

- Designed responsive websites, led rebrands, and developed brand identity, style guides, and digital marketing assets across these engagements.
